

Screening for frailty in Older PLHIV

DISCLOSURES

- Invited speaker for Viiv, Gilead, Abbvie, GSK, Pfizer, MSD
- Grants from MSD, Viiv, Gilead
- Sponsoring from Pfizer, Viiv, Gilead

Frailty

- People have a higher life expectancy.
- Heterogeneity!

- Frailty is defined as a general decline in physical health and a loss of reserves
- This leads to a person being less robust and less able to bounce back after an adverse event with a vulnerability to adverse health outcomes

Aging

Figuur 37: Aantal personen met hiv per leeftijdscategorie en jaar van medische opvolging, 2014-2023

Aging AND frailty

Results

Frailty prevalence at Visit 1

#AIDS2018 | @AIDS_conference | www.aids2018.org

(1) Frailty and risk for mortality

#AIDS2018 | @AIDS_conference | www.aids2018.org

(2) Association between frailty and incident comorbidity

479 HIV- 497 HIV+
Combined population

During 3727 person years of follow-up, 276 participants developed in total 329 comorbidities

Incident comorbidities

#AIDS2018 | @AIDS_conference | www.aids2018.org

PLHIV experience MORE comorbidities and at a younger age

Nanditha NGA, Paiero A, Tafessu HM, et al Excess burden of age-associated comorbidities among people living with HIV in British Columbia, Canada: a population-based cohort study *BMJ Open* 2021;11:e041734. doi: 10.1136/bmjopen-2020-041734

Behandeling

Hedendaagse uitdagingen

Multifactorial risk

Rodés et al., Aging with HIV: challenges and biomarkers, E Biomed, 2022

- Time of diagnosis
- Start ART (delay)
- Which type of ART
- CD4 nadir, CD4/CD8ratio, immune activation and exhaustion
- Lifestyle
- Levensstijl
- Psychosocial
- context

Heterogeneous patient group

What can we do?

- **Early and modern ART:** smaller reservoir, less immune-activation/exhaustion, less diversity
 - Avoid ART that has known C-V/metabolic side effects eg ABC
- **Tackle traditional risk factors:** smoking cessation, sedentarity...
- Consider **chronic inflammation** as the residual CV risk not taken into account in score systems:
 - REPRIEVE -> Prescribe statins >40y
- Screen for comorbidities, check polypharmacy: STOP criteria, propose vaccines AND **screen for frailty**...

EACS guidelines

- FRAILITY: **49 hits**
- **AVOID polypharmacy**
- Screening for frailty in persons with HIV **above 50 years of age should be considered**. The age cut-off was chosen as the incidence of frailty in persons with HIV has been shown to increase above this age. **Evidence of benefit is still unknown**. It is advocated by some experts.

Algorithm Recommended for Frailty Screening

Problem

- >50y= **51%** of PLHIV in Belgium!
- Is there an added value? Are they really that frail?
- Ressource cuts: no time, no money, no team...

PILOT project: Geriatric care program UZ GHENT

Goal: is it feasible? Is it necessary?

Screening questionnaire

VRAGENLIJST

1. Bent u alleenwonend of is er geen hulp mogelijk van een inwonend familielid en/of partner?

- ☐ Ja (1)
- ☐ Nee (0)

2. Hebt u moeilijkheden om zich te verplaatsen of bent u gevallen in het voorbije jaar?

- ☐ Ja (1)
- ☐ Nee (0)

3. Bent u opgenomen geweest in het ziekenhuis in de laatste 3 maanden (ongeplande opname)?

- ☐ Ja (1)
- ☐ Nee (0)

4. Hoe frequent voelde je je vermoeid de laatste 4 weken?

- ☐ dagelijks (1)
- ☐ meerdere keren per week (1)
- ☐ minder dan 1 keer per week (0)
- ☐ Nooit (0)

5. Is 1 van volgende zaken van toepassing voor u?

5.1 Heb je frequent last van geheugenverlies (bv. vergeet je speciale gebeurtenissen, recente gebeurtenissen, afspraken,...?)

- ☐ Ja (2)
- ☐ Nee (0)

5.2 Heb je het gevoel dat je trager bent in het redeneren, activiteiten plannen of problemen oplossen?

- ☐ Ja (2)
- ☐ Nee (0)

5.3 Heb je problemen om je aandacht ergens bij te houden (bv. een gesprek, een boek, een film)?

- ☐ Ja (2)
- ☐ Nee (0)

5.4 Hebben kennissen of familieleden al aangegeven dat je problemen zou hebben met concentratie of geheugen?

- ☐ Ja (2)
- ☐ Nee (0)

6. Gebruikt u 5 of meer geneesmiddelen op voorschrift naast ART?

- ☐ Ja (1)
- ☐ Nee (0)

7. Welke aandoeningen uit onderstaande lijst hebt u of hebt u gehad?

- ☐ Hypertensie
- ☐ Diabetes
- ☐ Kanker
- ☐ Chronische longproblemen
- ☐ Hartinfarct
- ☐ Hartfalen
- ☐ Astma
- ☐ Arthritis
- ☐ CVA
- ☐ Nierproblemen

5 of meer aandoeningen?

- ☐ Ja (1)
- ☐ Nee (0)

8. Gewicht

- 8.1 Hoeveel weeg je nu? ... kg
- 8.2 Hoeveel woog je een jaar geleden: ... kg

Meer dan 5% gewichtsverlies?

- ☐ Ja (1)
- ☐ Nee (0)

9. Andere reden waarom je geriatrische uitwerking nodig acht:

.....

.....

.....

Score ≥ 2
Further screening advised

Geriatric assessment

Assessment	Physical evaluation	Scores
• Demographics • Medical history • Self-reliance • Senses • Mobility • Fall risk • Incontinence • Pain • Social • Sexuality • Menopause • Cognition • Substance use • Medication • Sleep • Advanced care planning	• Short Performance Battery • Grip strength • Clinical examination • Blood analysis Additional available results • Dexascan • iFOBT • PAP • Mammography • Anal screening	• Daily activities: Katz - IADL • Mood: Mini GDS • Anxiety: HADS-A • Cognition: • MoCA • IHDS • Nutrition: MNA • Liver: FIB4 • Kidney: eGFR • Fracture risk: FRAX®

IADL: Instrumental Activities of Daily Living, **GDS:** Geriatric Depression Scale, **HADS-A:** Hospital Anxiety and Depression scale – anxiety, **MoCA:** Montreal Cognitive Assessment, **IHDS:** International HIV Dementia Scale, **MNA:** Mini Nutritional Assessment, **FIB4:** Fibrosis-4 Index for Liver Fibrosis, **eGFR:** estimated Glomerular Filtration Rate

PILOT project: preliminary results

Demographics (1)

- ▶ N = 37
- ▶ Age: Mean: $65,7 \pm 3,7$; 60 - 75y
- ▶ 35/37 (94,6%) male
- ▶ Years HIV+: Mean: $22,0 \pm 9,9$; 5 – 41
- ▶ CD4 nadir: Mean: $364,7 \pm 198,5$; 23 – 699
- ▶ ART: n=37 (100%)

Demographics (2)

- ▶ Education level:
 - ▶ Low ($\leq 12y$): 17 (45,9%)
 - ▶ High ($> 12y$): 20 (54,1%)
- ▶ Retirement: 25 (67,6%)
- ▶ **Living alone**: 23 (62,2%)

Substance use

- ▶ Smoking
 - ▶ No: 28 (75,7%)
 - ▶ Yes: 7 (18,9%)
 - ▶ Quit smoking: 1 (2,7%)
- ▶ Alcohol
 - ▶ Daily alcohol use: 12 (32,4%)
 - ▶ Problematic alcohol use (AUDIT-C): 9 (24,3%)
- ▶ Chemsex: 10 (27,0%)

Functional status

- ▶ Instrument
 - ▶ Instrumental Activities of Daily Living
 - ▶ 9 - 27, lower score = better functional status
- ▶ Mean 9,27 ± 1,5

Short Physical Performance Battery (SPPB)

- ▶ Instrument
 - ▶ SPPB: functional mobility
 - Walking speed
 - Balance
 - Leg strength
 - ▶ 0 – 12; ≤9: increased risk of new disabilities
- ▶ Mean $9,84 \pm 2,18$
- ▶ ≤9: 12/37 (32,4%)

[illegible]

- 

Neurocognitive function

- ▶ Montreal Cognitive Assessment (MOCA)
 - ▶ Cognitive impairment
 - ▶ Normal: $\geq 26/30$
- ▶ MOCA
 - ▶ Mean $25,03 \pm 2,64$; 18 - 28
 - ▶ <26 : 16 (43,2%)
- ▶ MOCA vs CD4 nadir: $p = 0,08$
- ▶ International HIV Dementia Scale (IHDS)
 - ▶ Dementia
 - ▶ Further evaluation: $\leq 10/12$
- ▶ IHDS
 - ▶ Mean $9,30 \pm 1,40$; 6,0 – 12,0
 - ▶ ≤ 10 : 27 (73,0%)
- ▶ IHDS vs CD4 nadir: $p = 0,007$

Nutritional status

- ▶ BMI: mean $27,48 \pm 5,23$; 14,6 – 42,9
- ▶ Mini Nutritional Assessment (MNA)
 - ▶ Risk of malnutrition
 - ▶ <24 : risk of malnutrition
 - ▶ Mean $24,05 \pm 4,20$; 13,5 – 30,0
 - ▶ <24 : 17 (45,9%)
- ▶ Remarkable: 12 PLHIV (44%) with $\text{BMI} \leq 25$ have a risk of malnutrition according to the MNA
- ▶ $\text{BMI} \uparrow \Rightarrow \downarrow \text{functional mobility}$ ($p=0,037$)

Management of comorbidities

- ▶ ART:
 - ▶ No ABC, 1PI based
 - ▶ Majority B/F/TAF-DTG/3TC (2x DTG/pifeltro, 2x Juluca)
- ▶ Use of statins:
 - ▶ N = 31/37 (84%)
- ▶ Vaccination status
 - ▶ Pneumococcal vaccination (at least one): 36/37 (97%)
 - ▶ Shingrix (at least one): 19/37 (51%) (despite reimbursement)

Acknowledgments

- ▶ Gilead for the financial support
- ▶ The research team:
 - ▶ **Dr. Bea Vandergucht**
 - ▶ **Liesbeth Delesie**, Dr. Sophie De Groote, PhD: research collaborators
 - ▶ Charlotte Vandenbulcke en Lies Vankerckhove, psychologists
 - ▶ Lauren Dewulf, med student
 - ▶ Dr. Wim Janssen and Dr. Anton Despiegeleer, geriatricians
- ▶ The department of General Internal Medicine, UZ Gent: all the staff and PLHIV followed at our HRC
